

Protecting Your Embedded System

Connected to the cloud and internally

Data is only accessible internally

C877

Rugged 3U VPX SBC using Intel Xeon D, Xilinx Zynq UltraScale+ FPGA and AiSecure™

C875

Rugged 3U VPX SBC using Intel Xeon E, Microsemi SmartFusion FPGA and AiSecure™

How is data accessed from your system?

I need to secure both the HW and SW

What level of cybersecurity protection do you need for your system?

YES

Only the SW using Intel's Trusted Platform architecture

I'm updating an existing system

Are you building a new embedded system?

Space-qualified SBCs

Military or defense SBCs
